

Talent Pipeline Analysis

Funnel Optimization & Predictive Performance Report

Owner: Jessica Donato

Data Insights: 600 Candidates Analytical Sample

Timeline: June 2026

Candidate Conversion Funnel

Analysis of absolute values, total conversion efficiency, and stage-to-stage conversion rates.

Top Funnel Filtering

About 48% of candidates are filtered right at the resume screening phase, which aligns with normal industry standards for talent qualification.

The Main Critical Bottleneck

The step between the Technical Test and Offer Sent has the lowest transition efficiency (41.8%), highlighting severe drop-offs right after technical evaluations.

Bottlenecks & Reasons for Rejection / Decline

Total distribution of unsuccessful candidates. Absolute counts inside bars, percentages positioned outside.

The Ghosting Phenomenon (63.9%)

The vast majority of candidate loss is passive (lack of response). This indicates unoptimized messaging copy, late follow-ups, or poor profile-to-role targeting.

Deep Dive: High-Performing Channels & Success Predictors

Data-driven answers on which sourcing strategies convert best and what signals indicate high success probability.

SOURCING CHANNEL	TOTAL SOURCED	HIRED	CONVERSION %
GitHub	73	8	10.96%
Inbound (Organic)	69	7	10.14%
Hunting (Active)	75	7	9.33%
LinkedIn	81	7	8.64%
Referrals (Indicações)	64	3	4.69%

GitHub & Inbound Win

Both channels exceed 10% conversion. Referrals drop significantly.

The Technical Signal

Hired candidates average 82.4 points on technical tests versus 72.8 for rejected profiles.

Recruiter Efficiency & Candidate Persistence Rules

Understanding when it's worth persisting with a candidate and identifying core recruiter performance anomalies.

RECRUITER NAME	TOTAL PIPELINE	TOTAL HIRED	CONVERSION %
Bruno	98	15	15.31%
Ana	75	10	13.33%
Carla	101	9	8.91%
Gustavo	121	6	4.96%

When to Persist

Initial outreach delays (5-6 days) are common for both hired and rejected candidates. Keep pursuing top profiles.

Low Conversion Window

Unsuccessful candidates are typically filtered out within 9.3 days.

Executive Insights & Bottleneck Dashboard

Cloudwalk.

A consolidated visual overview of the major anomalies and strategic discoveries across the talent pipeline.

63.9%

The Ghosting Plague

The single absolute loss factor in the pipeline. Over 360 candidates leave the funnel passively due to unoptimized outreach copy, sluggish response times, or faulty role targeting.

41.8%

Technical Evaluation Cliff

The sharpest drop-off transition in the middle funnel. Candidates lack a clear benchmark orientation. Hired talent averages a clear threshold score of **82.4 points**.

>10%

Sourcing Channel Shift

GitHub and **Inbound** lead conversion efficiencies, while conventional employee referrals underperformed significantly, hitting a low conversion ceiling of **4.69%**.

AI-Driven Workflow & Funnel Optimization

Cloudwalk.

Transforming traditional recruiting actions into autonomous AI processes to eliminate bottlenecks.

1. TOP OF FUNNEL - AI-DRIVEN SOURCING

Pivot Focus to GitHub & Inbound with AI

Shift bandwidth toward high conversion channels (>10%). Deploy AI agents to scan applied candidates, open-source repositories, analyzing code architecture and commit quality to instantly flag high-fit engineering talent.

Enforce 48-Hour SLAs on Contact

Minimize candidate cooling and cut the 63.9% ghosting rate with fast initial touchpoints.

Hyper-Personalized LLM Outreach

Use LLMs to read candidates' repositories/profiles and generate customized messages based on their code, actively neutralizing the 63.9% Ghosting rate.

Internal Referrals "VIP AI Lane"

Automate an AI priority ticket in the ATS that instantly routes internal recommendations to recruiters, guaranteeing first contact in under 24 hours.

2. MID OF FUNNEL - AUTONOMOUS SCREENING

Conversational Screening Agents

Deploy conversational AI via WhatsApp or application forms to filter budget alignment and timezone fit dynamically, auto-triaging before human interviews.

Recruiter Methodology Cloning

Analyze top-performing screening patterns from Bruno and Ana (>13% conv.) to fine-tune AI sourcing prompts and screeners across the entire squad.

Technical Test Copilot & Prep

Calibrate target test score to 82 points. Deploy automated AI code-reviewers for initial test insights and send candidates an automated prep-sheet to mitigate the 12.7% failure rate.

3. BOTTOM FUNNEL - PREDICTIVE CLOSING

AI-Assisted Debriefing Fast-Track

Trigger automated debriefing alerts immediately post-interview to slash the final offer gap to <48 hours, neutralizing competitive talent loss (4.9%).

Predictive Offer Composition

Use predictive models combining real-time tech market data with candidate-specific drivers (e.g., remote flexibility, welfare budgets) to generate irrecusable proposals.
